

Select Plus plans for California Small Business.

UnitedHealthcare Select Plus plans offer flexibility while encouraging employees to make better decisions about where to seek care. Members and employers can more easily control costs.

Members don't have to choose a primary care physician (PCP) or obtain referrals for eligible services from specialists. However, Select products promote the value of coordinated care, and every Select Plus member is automatically provided a PCP once enrolled. Members are encouraged to engage a PCP to help make the best care decisions for their specific health needs.

Experience greater savings.

Members are encouraged to use contracted freestanding (non-hospital) facilities, which are generally more cost-effective than hospital-based locations, for certain outpatient services. By seeking care at these freestanding facilities for services like outpatient surgery, laboratory tests, standard radiology and complex imaging services, members will avoid being charged a \$250 outpatient per-occurrence copayment.

Select Plus plans are designed to:

- Target key medical cost drivers in California to help control costs and lower premiums. The cost of many of these services varies greatly, even though they're provided at the same level of quality.
- Enable members to make more informed decisions about location of service by making cost differences more transparent.
- Provide members access to a large national network and decision-support tools.
